LASER CUTTING

Laser cutting offers exceptional precision and accuracy, making it ideal for detailed designs while minimizing material waste with its narrow kerf. It is also time and cost-efficient, providing fast processing speeds and reducing the need for post-finishing work.

Cutting Length Capacity: We handle large projects with the ability to cut sheets up to 6 meters in length, ensuring flexibility for longer components.

Material Thickness Range: We offer precise laser cutting for various materials with the following thickness capacities:

Mild Steel

Up to 16mm

Stainless Steel

Up to 10mm

Aluminum

Up to 10mm

Brass

Up to 3mm

TUBE LASER CUTTING

Tube laser cutting delivers exceptional precision and versatility, allowing for the creation of intricate shapes and designs in hollow section materials. It also minimizes waste and reduces the need for secondary processing.

Maximum Diameter

200mm

WELDING

TIG Welding

Excellent Finish: Produces high-quality, clean welds, making it ideal for applications where appearance and weld integrity are critical.

Precision Control: Offers precise control for intricate work, ensuring detailed and accurate results.

Ideal for Thin Materials: Low heat input minimizes distortion during welding, perfect for working with thinner materials.

MIG Welding

Fast: Provides higher welding speed, enhancing productivity and efficiency.

Versatile: Suitable for a wide range of materials and thicknesses, offering flexibility for various projects.

Ideal for Thick Materials: Deeper penetration allows for strong and durable welds, perfect for thicker components.

BENDING/FOLDING

Our press brakes offer high precision and versatility for various materials, enabling efficient, repeatable bending and folding with enhanced control and consistent quality in fabrication.

Bend Length

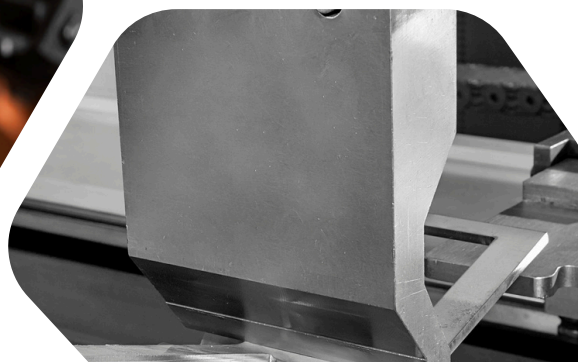

Maximum 4m

Accommodates larger components and complex designs.

Tonnage

Maximum 220 tons

Handles heavy-duty materials, ensuring robust and precise folds

ROLLING

Rolling provides precise and uniform shaping, enabling consistent forms and enhancing structural integrity for cylindrical and curved components in manufacturing.

COUNTERSINKING & TAPPING

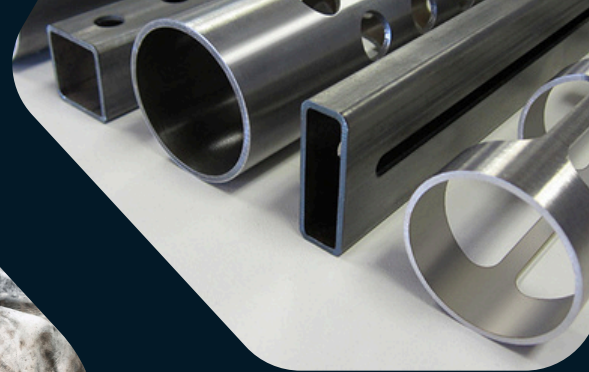

We provide countersinking and tapping, ensuring your parts are finished with accuracy and reliability. This allows us to manage all your manufacturing needs under one roof.

POWDER COATING

We offer in-house powder coating for a durable, high-quality finish that enhances the appearance and longevity of your products.
